Assignment

Given two emoji strings s1 and s2. Write a
 Pthread program to find out the number of sub-emoji-strings, in string s1, that is exactly the same as s2.

Assignment Examples

number_subEmojiStrings("\(\bigcircles \) \(\bigcircles \

- number_subEmojiStrings("\(\bigc\)", "\(\bigc\)") = 3
- number_subEmojiStrings("\(\pi\)", "\(\pi\)") = 0

Subsequence

not substring

Assignment

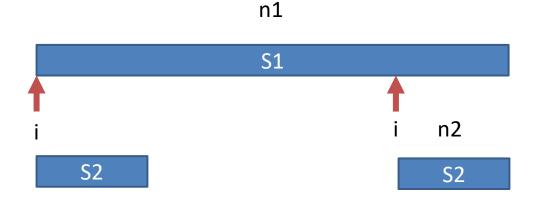

Input file:

https://raw.githubusercontent.com/kevinsuo/CS4 504/main/emoji.txt

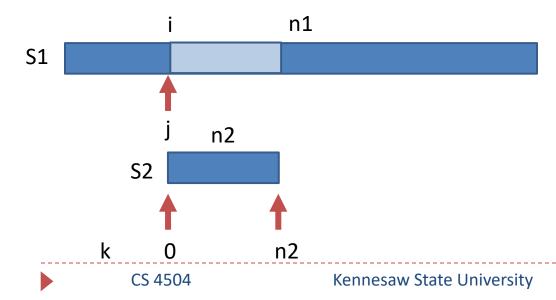

```
int total = 0;
                                          int n1, n2;
                                          char *s1,*s2;
                                          FILE *fp;
                                          int readf(FILE *fp)

                                                                      int count;
                                                                      for (i = 0; i <= (n1-n2); i++){</pre>
                                                                              count=0;
                                                                              for(j = i,k = 0; k < n2; j++,k++){ /*search for the next string of size of n2*/
                                                                                       if (*(s1+j)!=*(s2+k)){
                                                                                               break;
                                                                                      }else{
                                                                                               count++;
int main(int argc, char *argv[])
                                                                                       if(count==n2){
       int count;
                                                                                               total++;
                                                                                                                        /*find a substring in this step*/
                                                                                       }
       readf(fp):
       count = num_subEmojiString()
       princit the number of subscrings is: %d\n", count);
                                                                      return total;
```

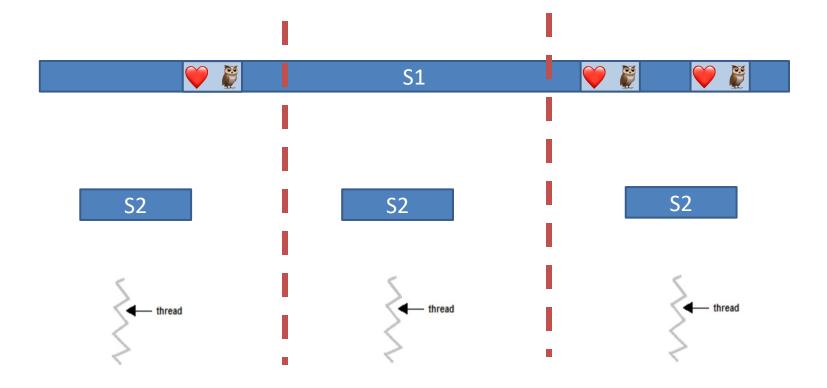

Assignment

```
int main(int argc, char *argv[])
              int count;
             readf(fp);
              count = num_subEmojiString();
             printf("The number of substrings is: %d\n", count);
             return 1;
(Different text files output is also different. For the emoji.txt,
the output is 55)
```

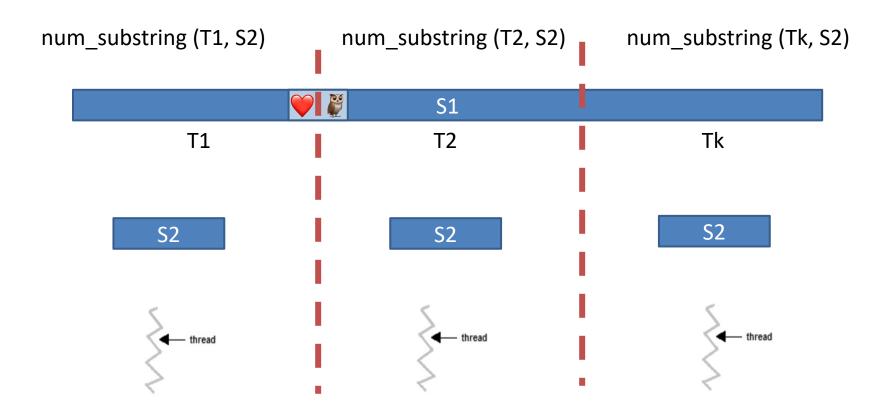

```
ksuo@LinuxKernel2 ~> ./project-pthread.o
The number of substrings is: 320
```

Idea

 Write a parallel program using Pthread based on this sequential solution.

Corner Case

Verify whether your parallel thread is correct

Modify the emoji.txt by yourself

 Compare the sequential and parallel program results that whether the total numbers are the same

```
ksuo@ltksup66583mac ~/Desktop> ./parallel.o
This is thread 0, num of substring 💖 is 🗂
This is thread 1, num of substring
